

BREAST DENSITY COMMUNITY PROJECT

We want to find out what **women aged 30 to 49 years** think about an experimental device (Mi~Scan®) that scans breasts to measure breast density. Breast density helps to understand if someone is at a higher risk of breast cancer.

We want to hear from women from all ethnicities, but particularly women from **Black African and Black Caribbean backgrounds**.

Gift vouchers
available

Take part in this project to make a difference for women in your community!
